Water Main Flushing

Please be advised that the Grayfox Water System will be flushed on Thursday, July 23rd, 2026, between the hours of 9 a.m. and noon as part of our routine maintenance procedure. Low level chlorination of the wells and distribution system will also be performed.

Drops in water pressure will be noticed during this time.

During this time, please avoid doing laundry and any other water related activity as rust coloring may be present in the water system.

Following the flushing, please turn on your outside water faucets to release any remaining rust particles in the line from water main to your house.

If you are in the habit of routinely “hammering” your individual water service pipe to remove sediment, this would be beneficial soon after the flushing process is completed.
